# Compose 26"

Spine-Based Workspaces

Ideal for open plans, Compose® 26" supports collaboration, connection, and individual focus work with a wide range of flexible applications offering full power, data, and technology connectivity. The minimalistic 26-inch-high panel design functions as a freestanding, independent system that also physically integrates with the standard Compose system—including non-powered gallery panels—making it easier to transition to spine-based planning.

#### Features

- Lighter-scale system within the Compose family, designed for configuration flexibility and easy adaptability as needs change
- Any freestanding fixed-height, height-adjustable, and mobile tables can be positioned along the panel as needed with easy access to power and data connectivity
- Uses a 26"(660.4 mm)-high freestanding panel with flat foot for a contemporary solution with a more open feel
- Supports both freestanding spine-based planning and traditional integrated panel-based planning
- Offers full power and data capabilities for heavier technology use
- Accommodates 90° and 120° applications
- Uses many of the same components and visually harmonizes with Compose
- Physically connects with standard Compose and Compose Connections workspace applications
- Supports gallery panels for an elevated aesthetic while using the spine for structure, power, and data
