

BuzziRing

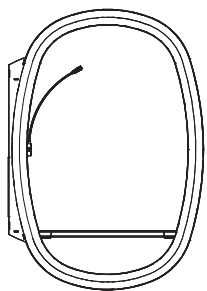

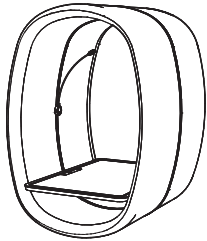

BuzziRing is a wall-mounted, compact and temporary work or meeting space designed with open-plan offices in mind. Thanks to the space between the wall and BuzziRing, the upholstered-foam body can absorb the sound waves from crowded environments and prevent them from bouncing back into the room.

Features

- Acoustically well-balanced on the inside, being an ideal space for short meetings, catching up on emails or making phone calls away from distractions
- Built-in table and functional light with two USB ports for charging
- Transparent screen which mitigates concerns about potential transmission
