**1951** emeco

Seating

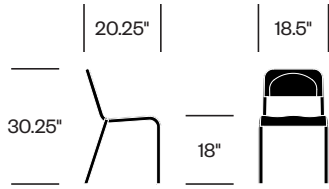

A look into Emeco's archives sparked the revival of a sleek design dating back to 1951. Adrian van Hooydonk of BMW Designworks tapped into luxury car design to reimagine the hand-brushed aluminum frame, combined with a new seat and back made of recycled plastic. The result: a modern collection of stools and stackable chairs that are sustainably made and built to last.

**Features**

- Made from 80% recycled aluminum
- Recycled PET seat and back available in six colors
- Felt or plastic glides available
- Side chair stacks 6 high
- Suitable for indoor and outdoor use
