# Infinito Wall Cassina

Bookcase

Based on the iconic Infinito bookcase designed by Franco Albini, Infinito Wall was developed in constant collaboration with his heirs. This contemporary version is directly affixed to the wall for greater stability and offers new modular elements for enhanced functionality. Combine low and high uprights to create media center configurations with shelving, storage compartments with wood or smoked glass doors, and an opening that accommodates a large TV or monitor.

Features

- Modular design allows shelves and cabinets to be moved up or down along the frame, for an array of configurations
- Can be configured with an opening to accommodate a TV or monitor up to 65" (diagonal)
- Cases used with low frames can be equipped for cable and wiring pass-through
- Doors can be adjusted as needed and have soft-close hinges
- Structure is designed to be fixed to the wall for stability
